

The Company

Alpi produces gaskets, specializing in sealing gaskets and rings for valves, pumps and plant used in the chemical and petrochemical industry, and equipment operating under high temperatures and pressures (water, solvents, acids, vapours, oils, hydrogen, thermal fluids, high pressures and high temperatures). Alpi has been operating since 1977.

✓ Problem...

Alpi needed to improve the set-up of its warehouse used to store gaskets prior to sale. The design had to consider the need to save space within the warehouse.

✓ Solution!

Alpi decided that the best way to achieve its objectives was to install two Modula storage systems. The use of space was maximized by taking advantage of the height of the building. A tangible benefit seen by Alpi was the improved picking speed: no dead-time since the operator and machinery work together at the same time; intuitive software simplifies picking operations; goods are transferred directly to the operator.

MODULA FEATURES

Trays: 108

Model: MX75

Capacity: 750 Kg/tray

Height: 4500 mm

No: 3 machines

Application: gasket storage

Software: none

Optionals: none

Interfaced management system: none
